Bank Marketing Deposit Performance

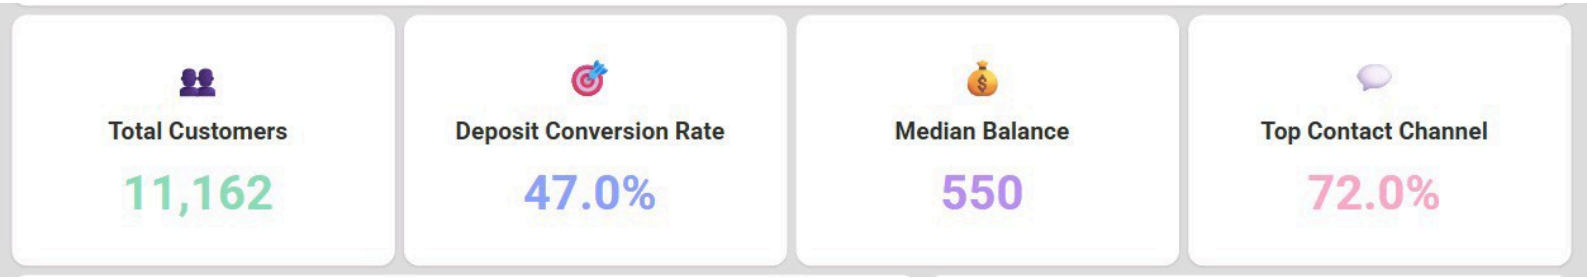

Overview

Shows who converts to deposits and under what conditions. It compares deposit outcomes by month, job, education, contact channel, and age bands, highlights daily patterns within months, and summarizes prior campaign outcomes. KPIs surface overall conversion, audience size, dominant contact channel, and typical balance to help optimize targeting and timing.

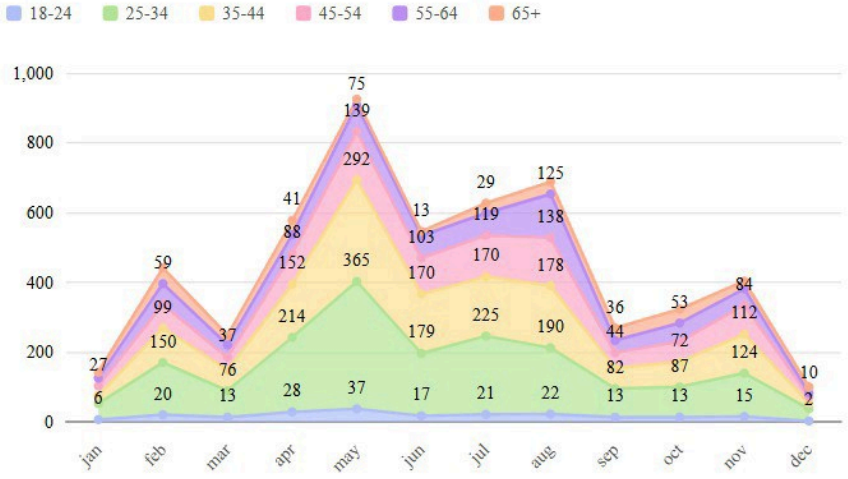

Overall Insights

- Conversion varies by month, with December and March showing the highest conversion rates (around 90% and 89%), while May has the lowest rate (~33%) despite the largest outreach, indicating quantity does not guarantee quality.
- High outreach volume does not guarantee high conversions (May: many contacts but low deposits), suggesting differences in audience or messaging across months.
- Deposit rates differ by job type, with students (≈75%) and retired (≈66%) leading, while blue-collar has the lowest (≈36%), a gap of about 38 percentage points between top and bottom groups.
- Mid-range job segments (management, unknown, admin) cluster around ~47–51% deposit rates, indicating a narrower band of performance compared to lower-performing services, housemaid, and blue-collar groups.
- May stands out as an outlier in deposits: it has the largest number of deposits (925) and the largest number of non-deposits (1,899), making it both a high-conversion and high-no-conversion month.
- Several months show imbalance between Yes and No deposits (e.g., August and July) where outreach yields more contacts but fewer deposits, suggesting a need for messaging or follow-up adjustments.
- Age bands 25–34 and 35–44 drive the bulk of deposits, with May peaking at 365 and 292 deposits respectively, fueling spring-season turnover.

- Younger (18–24) and oldest (65+) groups are smaller, but the 65+ group shows high conversion potential, implying a strategy combining high-volume 25–44 targeting with retention-focused efforts for 65+.
- Cellular channel dominates both volume and deposits (over 4,000 Yes/No deposits combined), indicating it is the most effective channel and should be prioritized.
- The unknown channel has a disproportionate amount of non-deposits relative to deposits, highlighting data quality or attribution issues that may obscure true performance and waste outreach resources.

Age Band Distribution Of Deposits

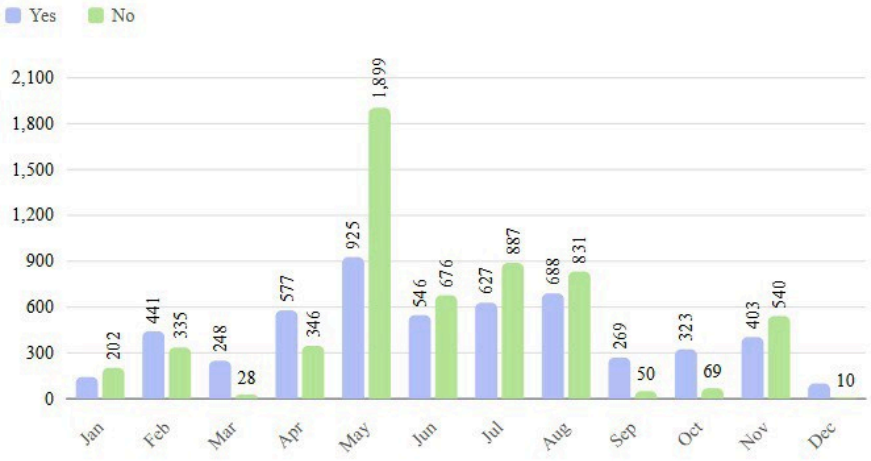

Key Insights

- Age bands 25-34 and 35-44 consistently produce the highest monthly deposit counts, with 25-34 peaking at 365 deposits in May and 35-44 peaking at 292 in May, driving most of the seasonal spike in spring.
- Younger (18-24) and oldest (65+) bands are much smaller in monthly counts (e.g., 18-24 peaks at 37 in May; 65+ peaks at 41 in Apr), but combined with high conversion rates in the 65+ group (see table) this suggests different segment strategies: high-volume targeting for 25-44 and quality/retention for 65+.

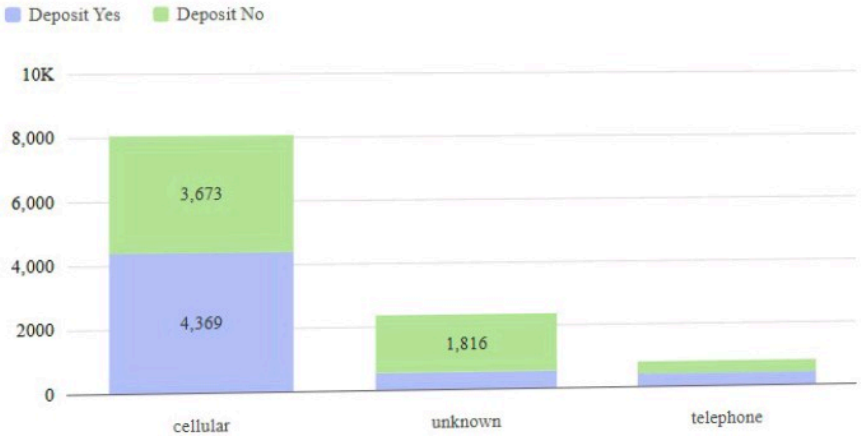

Key Insights

- May is an outlier in volume: the largest 'Yes' value is 925 and the largest 'No' value is 1,899 in May, making May both the highest-deposit month and the month with the biggest non-deposit volume.
- Several months show imbalance between Yes and No — e.g., Aug (Yes 688 vs No 831) and Jul (Yes 627 vs No 887) — indicating months where outreach produced more contacts without conversions and may need different messaging or follow-up.

Deposits By Month

Deposit Outcome By Contact Channel

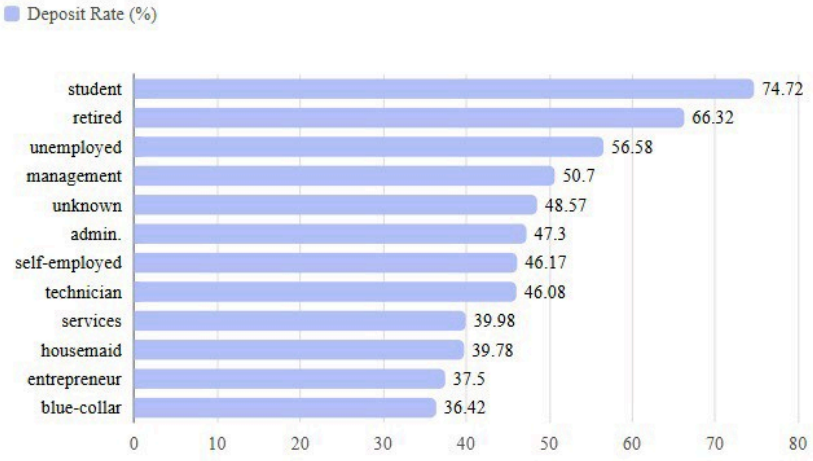

Key Insights

- Cellular is the dominant contact channel by volume and conversions: Deposit Yes = 4,369 and Deposit No = 3,673, far exceeding telephone (Yes 390 / No 384) and unknown (Yes 530 / No 1,816).
- The unknown channel has a high non-deposit count (1,816) relative to its deposit count (530), suggesting data quality or attribution issues for that channel that could be masking performance or wasting outreach.

Key Insights

- Deposit rates differ substantially by job: students lead at 74.72% and retired second at 66.32%, while blue-collar is lowest at 36.42%, a gap of 38.3 percentage points between highest and lowest.
- Several mid-range segments (management 50.7%, unknown 48.57%, admin. 47.3%) cluster around ~47–51%, suggesting focused interventions for the lower half (services 39.98%, housemaid 39.78%, blue-collar 36.42%) could yield meaningful improvements.

Monthly Outreach And Conversion Summary

Month	Contacts	Avg Calls Per Client	Prior Contact Rate	Previous Contacts Avg	Deposits	Convers... Rate
jan	344	1.73	35.5%	1.29	142	41.3%
feb	776	2.16	38.7%	1.3	441	56.8%
mar	276	2	36.2%	1.24	248	89.9%
apr	923	1.83	35.1%	0.98	577	62.5%
may	2824	2.33	21.9%	0.73	925	32.8%
jun	1222	2.85	14.5%	0.51	546	44.7%
jul	1514	3.29	10.1%	0.36	627	41.4%
aug	1519	3.51	18.4%	0.62	688	45.3%
sep	319	1.73	59.6%	2.07	269	84.3%

Key Insights

- Conversion rates vary widely by month: dec 90.9% (100 deposits from 110 contacts) and mar 89.9% (248 deposits from 276 contacts) are the highest, while may has a low conversion rate of 32.8% despite the largest outreach (2,824 contacts, 925 deposits).
- High-contact months do not guarantee high conversion: may had 2,824 contacts but only 925 deposits (32.8%), whereas feb got 441 deposits from 776 contacts for 56.8% conversion, indicating outreach quality or audience differences across months.
